Education

Data Analytics

Masai School | April 2022 - April 2023

Bachelor Of Computer Application

Shri Vasant Pharate Patil College of Arts,

Commerce and Science |

July 2019-Aug 2022 | **79.13%**

Diploma In Mechanical Engineering

D.Y.Patil College, Y.B.Patil Polytechnic College

of Engineering, Pune |

Aug 2014-July 2017 | **67.29%**

Technical Skills

Programming & Scripting

- **Languages:** Python, SQL
- **SQL Tools :** MySql, MS SQL server, Postgres , DBEaver, AWS Athena, spark SQL, PandaSQL, sqlite, sqlalchemy.
- **Code Quality Tools:** Pylint (for static code analysis), Black Formatter (for code formatting)

Big Data & Cloud Platforms

- **Big Data Tools:** PySpark, AWS Glue, AWS EMR
- **Cloud Platforms:** AWS (S3, Lambda, Athena, EMR, Glue, DynamoDB, Redshift, RDS, Step Function, EventBridge, cloud watch, etc)
- **ETL & Workflow Orchestration:** Apache Airflow, kafka, AWS Step Functions:

Data Engineering & Integration

- **Data Pipelines:** End-to-end design and migration using PySpark, AWS Glue, and Kafka
- **ETL Optimization:** Building and optimizing ETL workflows to handle data transformation
- **Version Control:** Git, Github, Bitbucket

Data Validation & Testing

- Developed automated data testing frameworks to validate transformations and ensure data quality in ETL pipelines.

Certification

- [Apache Airflow](#)
- [AWS Technical](#)
- [Data Analytics](#)
- [SQL hackerrank](#)

About Me

Data Engineer nearly 3 years of experience in scalable ETL pipelines, Data integration, Data Modeling and automation using Python, SQL, and AWS. Skilled in optimizing data workflows. Also experienced in AI Engineering, including LLMs, Generative AI, RAG, and Agentic AI. Strong problem-solving, communication, and adaptability in fast-paced, tech-driven environments. Passionate about building intelligent, data-driven solutions that bridge traditional engineering with cutting-edge AI.

Professional Highlights

Go Digital Technology Consulting LLP

Projects - (Aug 2023 - Present)

ALF (Advanced Load Forecasting)

- Built a scalable ETL Data pipelines, Processing 80K+ JSON files weekly, ensuring 100% accuracy and cutting processing time by 50% with parallel execution.
- Designed and implemented data ingestion, transformation, and loading using Python, PySpark, AWS S3, EMR, and Athena.
- load diverse data sources, ensuring high data quality and reliability for downstream machine learning forecasting tasks.
- Optimized datasets for machine learning and analytics, improving efficiency for predictive modeling.
- Enhanced complex queries performance in Athena by implementing partitioning and compression techniques.
- Collaborated with data scientists and other stakeholders to define requirements and deliver data solutions. Documented ETL processes and pipeline architecture for maintenance and future enhancements.

NextGenGis (Data Product)

- Designed and implemented an automation testing framework that reduced manual validation efforts by 80% and accelerated data integrity checks by 70%, leading to a significant reduction in errors.
- Architected a serverless orchestration layer using AWS Step Functions and Lambda to extract test cases from Jira and transform them into structured JSON using Amazon Bedrock (Claude).
- Developed a dynamic execution engine utilizing AWS Glue and PySpark to validate data transformations against business logic, storing comprehensive validation results in S3.
- Engineered an AI-agentic feedback loop that generates detailed summary reports and automatically synchronizes validation status with Jira comments and email notifications.
- Collaborated on high-scale ETL development to build and optimize data pipelines that transform complex geospatial and non-geospatial data based on evolving business requirements.
